

UMA Financial Platform KPI Comparison

The platform replaces Excel-based coordination with structured financial controls and traceability. The next priority is to measure operational gains and complete responsibility notifications across workflows.

1 Request quality and workflow performance

KPI and measure	Before the platform Excel based process	Current platform What changed	Recommended improvement Proposed target and owner
01 Request preparation Median active minutes per complete request	Excel forms required manual entry, calculations and coordination of supporting files.	Guided requests, saved drafts, automatic IGV and totals, and quotation payment splits reduce repeated calculation.	Target: 30% less preparation time than a matched Excel baseline. Time comparable cases. Owner: Operations Monthly
02 First pass completeness First-review acceptances / first reviews	Staff checked spreadsheet fields and supporting documents manually.	Required fields, document rules and XML comparisons detect missing or inconsistent information before progression.	Target: at least 90% accepted on first review. Record returns and reasons by request type. Owner: Accounting Monthly
03 Supplier onboarding Median hours from proposal to homologation	Supplier forms and identification details were maintained in Excel and checked separately.	Central supplier master, RUC duplicate checks, indexed Padrón lookup and background legal-representative lookup support review.	Target: 30% shorter median onboarding time. Track internal queues and external SUNAT waiting separately. Owner: Accounting Monthly
04 Approval timeliness Decisions within stage deadline / decisions	Approval follow-up depended on spreadsheet status updates and manual coordination.	Configured approval stages, area restrictions, deadlines and recorded decisions make waiting time traceable.	Target: at least 95% within configured deadlines. Monitor median and 90th-percentile stage time. Owner: Approvers Weekly
05 Calculation accuracy Incorrect saved line totals / lines checked	Quantity, price, IGV and totals depended on spreadsheet formulas or manual calculations.	Item totals and 18% IGV inclusion are calculated automatically; financial validation checks monetary consistency.	Target: 0 calculation discrepancies in monthly samples. Track avoided corrections separately. Owner: Accounting Monthly
06 Routing visibility Pending items with owner and reviewer alert / pending items	Responsibility and follow-up were coordinated through the Excel-based process.	Some approval notifications exist. Reimbursement bank review alerts and unified task ownership are not yet complete.	Target: 100% coverage after rollout. Complete the task inbox, ownership details, sender updates and reminders. Owner: IT and Finance Weekly

Measurement basis: Before describes the confirmed Excel-based process. Current describes implemented capability, not achieved KPI results. FPD sections 1 to 8 specify target controls; they do not establish historic performance rates.

2 Financial control and recommended targets

KPI and measure	Before the platform Excel based process	Current platform What changed	Recommended improvement Proposed target and owner
07 Budget compliance Unauthorized over-budget commitments	Teams reconciled budget availability against spreadsheet records.	Annual and monthly plans track committed, executed, paid and available balances; active controls manage limits and exceptions.	Target: 0 commitments beyond applicable limits without approval. Audit exceptions and monthly allocation accuracy. Owner: Budget Monthly
08 Bank review timeliness Profiles reviewed within 1 business day / reviewed profiles	Bank details and verification evidence required manual recording and follow-up.	Employee bank profiles require Accounting review. Supplier bank history and payment snapshots retain account changes.	Target: 90% reviewed within 1 business day. Add review alerts and queue ownership; retain masked banking data. Owner: Accounting Weekly
09 Payment evidence Confirmed payments with reference and amount / confirmed payments	Payment preparation and status tracking required spreadsheet updates and manual matching.	Accounts payable, batch files, payment confirmation and reconciliation are separate. Generating TXT does not mark payment as made.	Target: 100% evidenced payments. Certify bank formats and integrate bank responses before claiming automatic execution. Owner: Treasury Monthly
10 Overdue renditions Unsettled advances past due / advances due	Advances and expense renditions were tracked using Excel and supporting documents.	Advances remain in Account 14 until rendition; structured review tracks deductible expenses and outstanding balances.	Target: no more than 5% overdue. Add automatic reminders and ageing follow-up by employee. Owner: Accounting Weekly
11 Month end close Business days from month end to period closure	Closing required manual consolidation by cost center and expense account across sheets.	Balanced journals, consolidation checks and closed-period locks support closing. SIRE preparation exists; direct filing is separate.	Target: 25% fewer closing days than baseline, with zero reconciliation difference. Complete authorized SIRE integration. Owner: Accounting Monthly
12 Audit traceability Sampled key actions with actor time and evidence / sampled actions	Evidence was spread across workbooks and documents, requiring manual reconstruction.	Request references, role permissions, decision history, attachments and audit records link financial actions.	Target: 100% traceable sampled actions. Test evidence retrieval, backup restoration and access reviews. Owner: Finance and IT Monthly

Measurement plan: Approve these proposed 90-day targets, then establish a 30-day operational baseline. Compare at least 30 similar cases per process where volume allows; report the sample size and separate request types. Use historic Excel evidence or timed matched manual cases for before-versus-after time savings.

Sources: data/fpd.docx sections 1 to 4 and 6 to 8; the three official UMA Excel formats in data; current implementation and project records covering requirements, annual/monthly budgets, request items, quotation terms and background SUNAT lookup. External bank certification and SIRE submission remain separate dependencies.
